

Facilitator Agenda

Love Data Week Workshop - February 12, 2026

Facilitators & Roles

- **Photographer(s):** if we have enough participants to split into small groups, all of us; otherwise, Shani and Mahsan
 - Photography instructions: for ease of analysis...
 - When we take photos of representations participants make independently throughout the workshop
 - Include the relevant sticky note with the participant # in the photo
 - Include only ONE participant representation per photo
 - When photographing small groups' collaboratively created representations:
 - Include a sticky note with the relevant small group letter in the photo
 - Include only ONE small group representation per photo
- **Note taking:** All (see instructions in schedule below)
- **Introducing the workshop:** Lucy
- **Intervention presenter:** if we have enough participants to split into small groups, all of us; otherwise, Lucy

Duration: 2 hours

Summary: In this 2-hour workshop we'll be asking you to work individually and collaboratively to create representations of how AI works. This workshop is part of series of planned workshops for a research project on "Conceptual and Mental Models of AI." We're interested in studying (1) people's mental models of how AI works and (2) the extent to which AI literacy interventions impact people's mental models of AI. You'll be given a variety of materials to use to create representations of AI in response to questions we ask, first independently and then in small groups.

Scenario: Imagine or think back to a time you used an AI chatbot such as Claude, ChatGPT, or Gemini. What was or would be your prompt to the AI tool? What was or would be the AI tool's reply?

Set Up

- Place a participant information sheet and agenda (and possibly video/audio/image release form) at every table space
- Place a post-it note in a color NOT available to participants as a workshop material at every table space with a unique number (e.g., 1, 2, 3, etc.) for each participant
- Once all participants have arrived, if there are 6 or more participants, assign them to groups of 3-5 people by placing their group's letter (e.g., A, B, C, etc.) on the same sticky note as their participant number
 - Ideally, we'll have no more than 3 small groups, so that each of us can be a dedicated facilitator to one small group

Workshop Schedule

KEY: Instructions for facilitators are *italicized* and the suggested script for facilitators is in [blue](#)

TIME	ACTIVITY
11:05-11:15	[Note to facilitators: <i>Please ask participants to review the participant information sheet and complete the pre-workshop questionnaire on Qualtrics]</i>
11:15-11:25	[Lucy will introduce the workshop and then ask participants to complete the questionnaire and, while they're doing that, assign participants to small groups]
11:25-11:35	[Facilitator] Independently create a representation of how an AI chatbot works, using any combination of the materials in front of you. You can use the materials to write, sketch, diagram, or build things however you'd like. For this activity, please work independently, without discussing what you're doing with your neighbors. You'll have the opportunity to chat and work with them later on! We'll start a timer for 10 minutes. Please feel free to move around the room to get to any materials you'd like to work with.
11:35-11:40	[Facilitator] If you ended up moving to a different seat than where you started, please return to your seat with your representation of a chatbot. Wonderful, thank you! Now we'll go around our small groups and ask each of you to show us how you represented the AI chatbot. [Note to facilitators: <i>please make sure each participant speaks for no more than 1 minute]</i>
11:40-11:45	5-minute break [Note to facilitators: <i>please take pictures of your small group's representations of AI, capturing only 1 participant's representation in each photo]</i>
11:45-11:50	Intervention: [Facilitator] Does anyone have any questions or comments?
11:50-12:05	[Facilitator] Now we'll shift to group work! Thinking about the information I just presented, along with all of your individual representations of AI, work together to create a new representation of how AI works. Did you think about the process of curating a training dataset when you were working on your chatbot representation earlier? [Note for facilitators: <i>please take notes on the group discussion, observe only and do not participate in creating the representation]</i>
12:05-12:15	Break for snacks & refreshments
12:15-12:20	Intervention: [Note for facilitators: <i>please read the intervention to your small group, encouraging questions and comments from participants throughout the reading]</i> [Facilitator] Does anyone have any questions or comments?
12:20-12:35	[Facilitator] Let's go back to our group representation of how an AI chatbot works. Based on what you've just heard, would you like to add to or change anything about your representation? Did you think about machine learning models when you were working on your chatbot representation earlier? [Note for facilitators: <i>please take notes on the group discussion, observe only and do not participate in creating the representation]</i>
12:35-12:50	[Lucy will facilitate share back (all small groups together), closing remarks]
12:50-1:05	[Note to facilitators: <i>Please ask participants to complete questionnaire]</i>
